

# Tshewang Dendup

## Hydro-chemist

**Tshewang Dendup (Mr.)** is a Ph.D. scholar at Edith Cowan University working on hydrologic and hydrogeochemical processes of mine pit lakes in Western Australia. Mr. Dendup was a faculty member in the chemistry programme for over a decade and has taken various leadership roles including the Coordinator of the Centre for Science & Environmental Research (CSER) at Sherubtse College, Royal University of Bhutan. His current research focuses on the use of hydrological models based on geochemistry and water isotopes to understand the impact of climate change and developmental activities on the quality and quantity of water resources including inland aquatic areas such as mine pit lakes.
